Introducing The My.Climate App

from

Building Clouds

Comfort's only a click away

Temperate Service Level

Occupants use the my.climate app to send their climate adjustment request to their building manager. Current office temperature information is relayed along with the desired climate change. Includes a wireless sensor for each office/zone and the strati-fi my.climate hub.

Perfect for small office environments.

Balmy Service Level

All Temperate services plus, live helpdesk support. Includes automated remote adjustments to your HVAC system with climate change validation and customer feedback when requested. Outdoor weather conditions and historical temperature trending.

Perfect for large suites, schools, and hospitality environments.

Perfection Service Level

All Balmy services plus, automatic adjustments to HVAC and zone level controls. Includes dispatch of service vendors if desired comfort levels are not met. Access to advanced data analytics and reporting. Complete integration with existing building energy management systems.

Perfect for single tenant buildings and campus environments.
